

ETL ELECTRONICS LTD

The Leaders in the Industry

By purchasing Astus products, you will be doing business with the largest and most established company of fleet management solutions in Quebec.

After more than 17 years on the market, we are among the oldest companies in the world to offer fleet management solutions. Our customer-base of several thousand companies is spread over three continents.

We have built our reputation through our robust and innovative products. Many of our clients have unfortunately had a bad experience with competing products, and they were able to find with us a product that meets their expectations.

An Established Business in Quebec, Canada

We offer our employees a stimulating environment and get back a full commitment and dedication. Our turnover rate is near zero and our relationships with long-standing customers are ringing and reassuring evidence of the quality of our management.

Growth and sustainability of ETL Electronics is mainly based on:

- Dynamic R&D department, always on the lookout for changes in the market
- Reliable and evolving solutions
- Development of powerful and comprehensive software
- Commitment to a high quality customer service

The manufacturing of electronic modules, housings, wires, as well as programming and quality control are all made locally. The subcontractors that we work with must meet our quality and performance requirements.

Our Specialty: Fleet Management

Our engineers have many years of experience manufacturing, designing and inventing new ways to simplify the fleet manager's tasks.

The Astus management system consists of an electronic module transmitting its GPS position via modem, along with a host of other data, including speed and distance. In addition to providing this information in a completely automated fashion, the Astus GPS system is also highly durable, designed to withstand extreme weather conditions.

The Astus system is constantly evolving to meet the growing needs of customers. Keeping this in mind, we have developed a variety of products for different uses: fleet management, asset tracking, employee tracking, tracking on electronic tablets, etc. You will certainly find an Astus product that suits your needs!

A DIVERSIFIED PORTFOLIO

Satisfied Customers

Air France has chosen Astus after a selection process of 4 years, including 14 products from suppliers worldwide. Their fleet includes 2,000 vehicles and up to 50 users use the Astus system simultaneously.

RTP (public transit of Mexico City) chose Astus for the exceptional quality/price ratio. Astus enables them to obtain the positions of their vehicles (1,500 bus) in real time (every 15 seconds) and locate them on a map in areas specifically configured.

Communauto (a well-established Quebec car-sharing company) selected Astus after a brief experience with a competing product. Of utmost importance to them were our integration with their reservation and billing software, absolute accuracy on time and distance, and low battery consumption. Their fleet is of over 1,200 vehicles, and Astus also manages the 25,000 RFID keys of their members.

A Tracking System Adapted To Your Needs

Here is an overview of some of our main products:

| HARDWARE | | SOFTWARE | |
|--|---|---|--|
|  Astus Tag | Our core product, which transmits the vehicle's position (as well as speed, distance, etc.) very accurately. It provides information on other vehicles components (doors, hood, temperature, etc.). |  Astus 2012 | Our main software, which tracks vehicles, generates reports, and other functions such as route planning and maintenance management. It is available in a Windows version and on the web. |
|  Astus Garmin | Astus Tag is combined with a Garmin navigation screen to provide a fleet management system even more comprehensive, and better task dispatching. |  Astus MOBI | Perform your fleet management from your smartphone through our mobile application, with simplified features. |
|  Astus Metal | Monitoring system for goods/equipment, which is mobile and battery operated. It can be used for vehicles, trailers or valuables, among others. |  Astus PICO | Our software developed for a wide variety of smartphones can track the movements in Astus software, and also features a lone worker protection function. |
